Update Recipe Model:
- I am going to add a difficulty attribute to my model. I had previously left it out because it should be automatically calculated but I'm thinking I need to add it back now. This one will be a string attribute and will be stored in the database.
- I am also going to add the pic attribute so that my recipes have pictures. This variable will be an image type.

Design Inspiration for Recipe App:
- #1 I like this one because of the colors and the fonts. It looks like a comic book. And the meals look appetizing with these colors surrounding it.

- #2 Again the green and the purple stand out to me with this application. I also like the widget-like boxes for the recipes. Easy to read.

- #3 I like the dark background as it makes the recipes standout.
